1) KENYA COMMERCIAL BANK

MOMBASA

P.O. BOX

MOMBASA

Yours faithfully,

James Ndata

Managing Director,

Jayfel Engineering Limited

SECTION 8:

WORK METHODOLOGY

DESCRIPTION OF THE WORK

Section 1

The client requires the construction of a residential block that will contain a number of houses of the same or different sizes, depending on the budget available to work with. The initial works will involve ripping of any existing structures that sit on the chosen site for development.

Section 2

The site for development is now clear of uneven surfaces, so based on the nature of the residential block, the ground breaking construction can now begin.

On all sections, the works will also include site preparation, restriction of workable area around the complex, earthworks, drainage, supply of material and concrete works.

MATERIALS

Material sites for Sub base and base

Material sites for the gravel are the responsibility of the contractor and will be embarked on once the contract is awarded to ensure they comply with the specifications laid out.

Crushing of the materials

Aggregates for both concrete works and chippings would be sourced from the contractor's preferred source based on quality and budget available.

Cement and Ballast Mixing

The mixing of gravel material with cement and lime will be done by use of pulvimixer.

WORK ACTIVITIES

The construction activities will be carried out as detailed below:

MOBILIZATION

This activity involves the establishment of the camp for the contractor and movement of equipment and materials to the site.

SITE CLEARANCE

Where necessary and especially on new construction, the site will be cleared within the area to set up the complex and topsoil stripping done.

SURVEYING AND PROGRESS MONITORING

The preliminary survey will be done to determine the OGLs and establish the control points. Subsequent surveys will be done at every stage of the works in order to ascertain the design is adhered to and for the calculation of the quantities.
